51 Single Chip C Language

The Intel MCS-51 (commonly termed 8051) is a single chip microcontroller (MCU) series developed by Intel in 1980 for use in embedded systems. The architect of the instruction set of the Intel MCS-51 was John H. Wharton. Intel's original versions were popular in the 1980s and early 1990s and enhanced binary compatible derivatives remain popular today. It is an example of a complex instruction ...

A SOC is really all these specialised components, networking, memory, processor, video and such, crammed into a single chip. The advantage of this is lower cost per chip and lower latency , but with older process sizes, this wasn't possible - the chip would be too big, and you'd have lower yield.

SoC is a full "system" on a "chip". So whatever system you put on a single chip, is an SoC, right? DSP is a processing unit for specific use, mainly mathematical operations, right? Now. Does that mean that everything in a uC they are all required to be in one chip? because if yes, then uC is in fact a SoC. Maybe a small one, but it is. What ...
