Problem: Pollution. A pollutant is any substance that, when in an environment, poisons our air, land and water. Chemicals have poisoned all of the world, harming humans, wildlife, and plant life, on land, sea and air. Approximately 100,000 synthetic chemicals are now on the market, with one thousand new chemicals are added yearly.

The Wingspread Statement In 1991, after years of reviewing research that examined a variety of problems with the wildlife of the Great Lakes region of the United States, Theo Colborn and a team of scientists pieced together troubling data from several fields of science which indicated that man-made chemicals introduced into the environment are having a variety of effects on animals and humans ...

Endocrine Disrupting Chemicals and ... - Gender Tree

Dr. John Lee shares stories from his practice about helping women get pregnant and explains what causes infertility, how fertility works and how to prevent a miscarriage.

Infertility: Getting Pregnant and Staying Pregnant

History. The term endocrine disruptor was coined at the Wingspread Conference Centre in Wisconsin, in 1991. One of the early papers on the phenomenon was by Theo Colborn in 1993. In this paper, she stated that environmental chemicals disrupt the development of the endocrine system, and that effects of exposure during development are often permanent.

The DSM-IV-TR classifies conversion disorder as one of the somatoform disorders which were first classified as a group of mental disorders in 1980 in the DSM III.. The new description of somatic symptom disorder in DSM-5 represents a big step forward, because the decision has been made to use, for classification, a positive criterion, namely maladaptive reaction to a somatic symptom, instead ...
