A large part of this book is devoted to a study of possible design procedures for various types of lens or mirror systems, with fully worked examples of each. The reader is urged to follow the logic of these examples and be sure that he understands what is happening, noticing particularly how each available degree of freedom is used to control one aberration.

Understanding fundamentals of imaging lenses. January 1, 2005. By ROBERT BLANKINSHIP. ... Video lenses generally can be used with any camera if the lens design format is larger or equal to that of the camera. If the sensor is too large, vignetting (tunnel vision) will occur. For this reason, most lenses will specify a maximum format, or maximum ...

### **Lens Design Fundamentals by Rudolf Kingslake (ebook)**

Optical lens design is the process of designing a lens to meet a set of performance requirements and constraints, including cost and manufacturing limitations. Parameters include surface profile types (spherical, aspheric, holographic, diffractive, etc.), as well as radius of curvature, distance to the next surface, material type and optionally tilt and decenter.
